As a dynamic and motivated professional, I have demonstrated a unique blend of entrepreneurial and technical skills throughout my career. My professional journey began in a family-run fruit and vegetable wholesale business, where I managed various aspects including inventory control, logistics, customer service, purchasing, and financial management. This hands-on experience provided me with a robust understanding of business operations, particularly in a fast-paced, competitive industry.

In this role, I developed strong problem-solving skills and honed my ability to think analytically. Often, I utilized creative strategies to tackle everyday business challenges. My adaptability and resilience were tested as I became proficient in using technology to boost operational efficiency, demonstrating agility in a rapidly evolving environment.

Passionate about customer service, I believe in creating positive experiences for others - a cornerstone in any service-oriented role. As a team leader, I prioritized fostering a positive work environment, understanding that employee motivation is crucial for business success.

Recently, I set a new goal for myself: to become a full stack software developer. This decision was driven by my love for learning and my fascination with the endless possibilities technology offers. I am currently embarking on this journey, eager to build upon my existing skill set and explore new frontiers in software development.

As I transition into this new phase, I am confident that my strong work ethic, strategic thinking, and dedication will serve me well. I am excited about the prospect of applying my skills to new challenges and opportunities in the field of software development

Technical Skill

Frontend: *HTML5, CSS, JQuery, Javascript, Bootstrap, REACT, AJAX, SASS, Personal Web Application*
Backend: *MySQL, MongoDB, Express, Node, Handlebars, Amazon Web Services,*

Projects
